

Supporting the future of infrastructure

We are looking ahead to the future of the Transport and Infrastructure sectors. As we continue to strategically invest in technology and resource in order to continue helping our clients to meet their targets across road, rail, aviation and flood resilience, here's what we are expecting to see:

The National Infrastructure Commission's core proposals wants to see:

£43 million

of stable long-term transport funding for regional cities

Using our experience in the sector, we have delivered on two large scale land referencing schemes for aviation projects as part of their long term expansion plans in the last 12 months.

12
Months

A national standard of flood resilience for all communities by 2050

Up to

£110 billion

is to be invested in HS2.

Over £27 billion being invested in road networks over the next five years from 2020 - 2025.

The Government, the Environment Agency and Local Councils are investing £2.6 billion to flood resilience - with schemes set to make

300,000 homes

more resilient by 2021.

Network Rail intends to spend £53 billion over the next 5 years of CP6 (2019-2024) to improve, maintain and renew our railway network.

£53 billion

By looking ahead on these large-scale projects and the land acquisition that will no-doubt accompany them we are tailoring our teams of surveyors, geomatics specialists, planners and environmentalists to provide expert advice on land matters, referencing, notice serving, DCO/CPO's, stakeholder engagement and more!
