

# Reshaping the future of the Water Industry

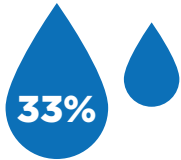

The Water Industry is under constant pressure to maintain and expand existing clean water and sewage networks. Our teams work hard to deliver capital projects on behalf of our clients in order to meet the growing demand for water and waste services.

Our clients are also faced with maintaining great customer service, providing good value for money, and meeting the improved water quality targets set by OFWAT.

We also provide Property Asset Management services to our water clients. Our industry knowledge enables us to take a long-range view on clients' portfolios, providing well rounded, reasoned advice on the management of their assets.

DM's water clients serve over 33% of the UK's population

**29,475,000**

Customers households and businesses

**3,575,000,000**

Litres of drinking water - which is enough to fill:

**1430 Olympic swimming pools**

kilometers of water pipe

kilometers of sewage pipe

Which is enough to go around the world

**x5 x6**

**3,250 acres of land**

37 strategic disposals of land and property assets to ensure maximum capital potential for our clients

**300+ sites**

managed across the country, a mixture of residential, commercial and agricultural properties

**250+ tenancies**

We are proud to work closely with our Water clients to find new ways of meeting these objectives and helping them increase their efficiencies, and regularly see our day-to-day work contributing to the industry nationwide.
